

TT User Setup

Trader Setup and Administration

Accuracy. Stability. Speed.

These are the hallmarks of the X_TRADER platform from Trading Technologies (TT).

TT pioneered the development of electronic derivatives trading. Loaded with innovative features, supremely reliable and reflex-fast, TT's X_TRADER platform is the front-end screen of choice for professional derivatives traders around the world.

TT provides connectivity to the primary derivatives exchanges through the world's major global clearing firms. As a futures trader, you can use the X_TRADER platform to trade derivatives in virtually any market.

Some of the world's most successful traders depend on X_TRADER to manage their trades. Do they know something you don't know?

See what you've been missing. Contact a Trading Technologies representative and harness the extreme performance of X_TRADER.

TT User Setup is a free, client-server application used by administrators to configure traders for Universal Login which allows a trader to log in to multiple exchanges with a single username and password. TT User Setup versions 7.1 and later also replace the Guardian Admin screens for setting up pre-trade risk limits.

Benefits of TT User Setup

- Configure traders to trade on multiple exchanges with a single username and password
- Easily construct rules for password complexity, reuse, expiration and lockout
- Run multiple servers for high login availability with automatic data replication among servers
- Use "copy" and "assign" functionality to eliminate duplicate data entry and to quickly and accurately configure traders
- Limit the number of X_TRADER® workstations a trader can be logged in to; this helps control traders' license consumption
- Monitor usernames and software versions of logged in users
- Avoid having to setup passwords in Windows User Manager/Active Directory

X_TRADER®/X_RISK® Integration

- Control X_TRADER customer defaults; provides control over which account numbers a trader can use per market, gateway, product type or product
- Control various X_TRADER properties such as "Avoid Orders that Cross"
- Configure administrative permissions for an X_RISK user

Versions 7.1 and Later

- Automatic upgrade from Guardian Risk
- Run multiple variations of reports and export them to a CSV file or HTML
- Easily sort and filter data; for example, start typing into a filter to reveal all users who are set up to trade a specific product
- Configure group administrators with rights to manage only specific groups of users, account numbers, exchange credentials and risk limits
- Configure an administrator who is only able to unlock traders and reset their passwords
- Configure a max long/short position limit to help risk-manage spread traders
- Run diagnostic checks to ensure that traders and accounts are set up properly
- Collect log files from remote machines in the environment
- View an audit trail that captures updates to traders and their risk, etc.

Mass Editing

Easily edit large amounts of data in mass; some useful examples include:

- Switch between X_TRADER and X_TRADER Pro for many traders at once
- Update a position limit for many traders at once
- Update a credit limit for many traders at once
- Add a new gateway to many users at once
- Add or remove multiple traders' login access to a particular gateway

The screenshot shows the 'Product Limits' application window. At the top, there are buttons for 'New...', 'Edit...', 'Copy...', and 'Delete'. Below these is a table with columns: Users, Gateway, Product, Prod Type, Max Ord Qty, Max Pos, Max Long/Short, and Allow Trade Out. The table contains 22 rows of data. A context menu is open over the table, showing options: 'New...', 'Edit...' (highlighted), 'Copy...', 'Delete', 'Assign Product Limits to additional Gateway Logins...', 'Export to HTML', 'Export to CSV', 'Specify sort criteria...', and 'Show/Hide/Arrange columns...'. At the bottom of the window, it says 'Total rows displayed: 27 Rows selected: 3' and 'Ready (To edit multiple records, just select them and click Edit...)'.

Users	Gateway	Product	Prod Type	Max Ord Qty	Max Pos	Max Long/Short	Allow Trade Out
13 ANDREA, JB...	Eurex	*	SPREAD	Unlimited	Unlimited		Yes
14 ANDREA, JB...	LIFFE	*	FUTURE	Unlimited	Unlimited	Unlimited	Yes
15 ANDREA, JB...	LIFFE	*	SPREAD	Unlimited	Unlimited		Yes
16 JDOE	CME	*	FUTURE	10	Unlimited	Unlimited	Yes
17 JDOE	Eurex	*	FUTURE	10	Unlimited	Unlimited	Yes
18 JDOE	LIFFE	*	FUTURE	10	Unlimited	Unlimited	Yes
19 MFORST	CME	*	FUTURE	10	Unlimited	Unlimited	Yes
20 MFORST	Eurex	*	FUTURE	10	Unlimited	Unlimited	Yes
21 MFORST	LIFFE	*	FUTURE	10	Unlimited	Unlimited	Yes
22 PKARVOSK...	CME	*	FUTURE	Unlimited	Unlimited		

Planned for 2010

- Apply a user-level credit limit, as opposed to the credit limit that is per member/group/trader ID (this is useful for traders who trade with multiple IDs)
- Configure FIX Adapter clients and servers
- Limit the number of X_TRADER workstations that a group of traders can be logged in to
- Force traders to log on to specified gateways (force them to download their positions)
- Control which X_TRADER versions are allowed to log in

A gradual migration to using Universal Login for traders is possible. Ask your TAM for details.
